

## "If you think compliance is expensive, try non-compliance"

- Former U.S. Deputy Attorney General Paul McNulty.

### No-one intended for this to happen...

A small contained spill, a burst hose or pump failure, a truck or loco rollover, an oil or chemical spill into a water course or river, a major environmental hazard with huge impact... no-one intends for these incidents to happen.

### So much unnecessary damage...

Risk mitigation is part of company policy and operations. There is so much affected by accidents and potentially many parties involved -

- Company personnel
- Immediate environment
- Neighbouring organisations
- Drains and waterways
- WHS Auditors
- EPA
- Lawyers
- Penalties and media exposure

### It's so simple... just need to do it

Emergency Response Training Competency is an essential element of organisational responsibility. Without it, the ramifications could be significant.

There is no logical explanation why some organisations believe that training is not so essential. Complacency has no place when it comes to Safety and Environmental matters.

### 25 years of industry experience

*Oiltrac's* comprehensive training portfolio is a recognised value add and has been welcomed throughout Australia and New Zealand for over 25 years.

It is a must have for all operators who handle Oil and Chemicals as part of their operation.

Safety and Compliance are not there to be compromised.
